

# GB Sciences Celebrates Their First Las Vegas Harvest

## *This First Crop Begins The Company's Revenue Stream*

LAS VEGAS, 5/15/17/PR Newswire/ -- GB Sciences, Inc. (OTCQB: GBLX) is pleased to announce that the initial harvest at its Cultivation Labs facility in Las Vegas, Nevada. When fully operational, Cultivation Labs will house 7200 cannabis plants, under 600 grow lights within its 28,000ft., and are expected to generate approximately \$10 million in annual revenue. The beginning of the Company's revenue stream is exciting! GB is one of only a handful of American public companies that actually produce cannabis, and is one of only two companies that are fully reporting, and therefore are fully transparent to investors. More important, is the fact that GB has an innovative plan for the use of those revenues, and the substantial profits that they will create.

CEO John Poss said *"I had the distinct honor and pleasure of personally making the first cuts from our first harvest last week. I was struck that in doing so I was not just cutting into a leaf or stem, but rather that I was cutting into the bias and blindness that has for so many years kept such an important palliative as cannabis away from the millions of patients who need it. We are the biopharma company of the future, because we are informed by science, but inspired by patients."*

Since its inception, the prime directive of GB Sciences has been the creation of a quality controlled cannabis cultivation and extraction facility to provide the compounds for formulating medicines treating a wide range of diseases. The Cultivation Labs were created to serve that specific need. But with the advent of the world's largest recreational market in Las Vegas beginning July 1, 2017, the Cultivation Labs will provide medical-grade cannabis to the burgeoning Las Vegas recreational market, while simultaneously supporting the company's all-important medical research and development efforts. The financial benefits of this unique synergy are self-evident.

Chief Science Officer Andrea Small-Howard said *"It all starts with the plant... and we touch the plant. The advent of recreational cannabis in Nevada will enable us to geometrically increase our efforts in drug research and discovery. We have already devoted substantial resources to the development of important technologies, such as our proprietary tissue-propagation methods which stop genetic drift, preserving the unique identity of cultivated strains. With the addition of the recreational market income, we will now be able to increase experimentation with different strains, and collect important data relating to the efficacy of those strains."*

### **About GB Sciences, Inc.**
